

In order to maintain a list of all content items that shall be placed in my portfolio I started straight from categories not from the separate items because it was easier for me to think about my achievements using these categories.

This portfolio shall characterize me as a successful and active student with plenty achievements, so I came up with four different categories that may characterize me in such way: Education, Addition Education, Olympiads and Extracurricular Activities. After this categorization it was not hard to come up with a list of items for each category.

The navigation on a web site shall be easy and intuitive, so I decided not to imagine anything sophisticated but to make a navigation scheme based on the categories and added the home and contact pages in there. It is pretty simple and will give a user the perception of what can be found in any of the navigation categories.

I was inspired by the portfolio of Hollyce Balentine that I analyzed for the Module 2.
